ME 543 Computational Fluid Dynamics Computer Assignment – 3 Part B

Due Date for Submission: 18.10.15 (Sunday), No Late Submission

Solve the following partial differential equation using the finite difference method with the specified boundary conditions for the geometry with **101×61** grid size as shown in the figure.

$$\frac{\partial^{2}\psi}{\partial x^{2}} + \frac{\partial^{2}\psi}{\partial y^{2}} = -\omega$$

$$u\frac{\partial\omega}{\partial x} + v\frac{\partial\omega}{\partial y} = \frac{1}{\text{Re}}\left(\frac{\partial^{2}\omega}{\partial x^{2}} + \frac{\partial^{2}\omega}{\partial y^{2}}\right) + \frac{Ra}{Re\ Pe}\frac{\partial T}{\partial x}$$

$$u = \frac{\partial\psi}{\partial y}, \quad v = -\frac{\partial\psi}{\partial x}$$

$$u\frac{\partial T}{\partial x} + v\frac{\partial T}{\partial y} = \frac{1}{\text{Pe}}\left(\frac{\partial^{2}T}{\partial x^{2}} + \frac{\partial^{2}T}{\partial y^{2}}\right)$$

$$Re = \frac{u_{o}H}{v}, \quad Pr = \frac{v}{k}, \quad Pe = Re\ Pr, \qquad Ra = \frac{\beta g\Delta TH^{3}}{v\alpha}$$

Apply the finite difference discretization to replace all derivatives with the corresponding central difference expressions with uniform grid $M \times N$ and write the discretized equations of the governing equations and boundary conditions of stream function & vorticity in the **report**. Write the code in such a way so that you can input the values of Re, N, M, H, L. Submit the hard copy of the results and discussion for **Re=18.1**, **Pr=0.71**, **Ra=2472** in terms of streamlines, velocity vectors, u and v velocity profile at locations x=2 and, 2.5 (in same x-y plot). **Email** only the soft copy of the code.

$$u = \frac{\partial v}{\partial x} = \frac{\partial \omega}{\partial x} = \frac{\partial T}{\partial x} = 0$$

$$u = v = T = 0$$

$$H = 1$$

$$u = \frac{\partial v}{\partial x} = \frac{\partial \omega}{\partial x} = \frac{\partial T}{\partial x} = 0$$

$$u = v = T = 0$$

$$H = 1$$

$$u = \frac{\partial v}{\partial x} = \frac{\partial \omega}{\partial x} = \frac{\partial T}{\partial x} = 0$$
